

strangeparts / gasmask

Safety Warnings and Guidance

- 1) **Don't use PLA if you plan on use in a protest environment.** If your mask were to be hit, it could shatter and cut your face
- 2) **Use a gasket where the mask touches your face.** Otherwise it might not seal properly.
- 3) **Test the whole mask safely, before exposing yourself to any actual threat**
- 4) **Install the exhaust valve, really don't skip this one.** It can be very easy to not notice CO₂ before it is too late.
- 5) **Make sure all the parts seal well.** If the parts don't need to come apart, glue them together.
